

Keeping Industry Turning

Series 10 IE3

Frame sizes 80 to 355

Introduction

Specification

Specification	Standard product	Option
Frame material	80 - 160 aluminium	-
	80 - 355 cast iron	-
Enclosure	IP55	IP56, IP65
Mounting option	Foot [B3], Flange [B5], Face [B14]	-
	Foot & Flange [B35], Foot & Face [B34]	-
Terminal box position	Top	-
Voltage	3 kW and below: 230 / 400	-
	4 kW and above: 400 / 690	-
Frequency	50 Hz	60 Hz
Cooling	IC411	-
Bearing location	Aluminium (80 - 160): non drive end	-
	Cast iron (80 - 355): drive end	-
Lubrication	80 - 225: double-shielded bearings	-
	250 - 355: through greasing	-
Insulation	class F	-
Temperature rise	class B	-
Paint colour	water blue (RAL 5021)	-
Heaters	Aluminium (80 - 160): -	110 - 115 volts or 220 - 240 volts
	Cast iron (80 - 355): 220 - 240 volts	110 - 115 volts
Thermal protection - IE3	Aluminium (80 - 160): Thermistors	-
	Cast iron (80 - 355): Thermistors	-
Inverter Duty (with derate)	Variable Torque: 10:1	-
	Constant Torque: 2:1	-
Ambient temperature	-30°C to + 40°C	-

The above specification and options give a brief summary of features available for the Series 10 IE3 range.
For a full listing of optional features, please contact Brook Crompton sales.

Brook Crompton Keeping Industry Turning

Brook Crompton, the original innovator in electric motor development, is a leading provider of energy efficient electric motors. With over 110 years' technical & design expertise, UK-based Brook Crompton delivers consistently reliable electric motors to a global market.

Trusted to power limitless industrial activities across diverse market sectors, the robust design of Brook Crompton's electric motors drives fans, pumps, compressors, conveyors and more, every second, of every day, of every year.

Driven by technology and innovation, Brook Crompton has one of the widest available ranges of electric motors for operation in hazardous atmospheres and hostile environments.

Renowned for their adaptability, Brook Crompton's extensive motor stock can be modified to suit the needs of different market sectors, with technical support from the company's knowledgeable team readily available to ensure the correct selection of motors for any application. For bespoke situations and complete flexibility, Brook Crompton will design and manufacture to meet individual customer specifications.

Brook Crompton has a long-standing reputation for efficient customer service, supporting customers worldwide through its global network. Specialist Brook Crompton Motor Centres operate alongside approved product distributors throughout the UK, mainland Europe, Middle East, Canada, USA, and Asia Pacific.

Shaping the future of electric motors, Brook Crompton is focused on the development of new products that improve energy efficiency, offer lower cost of ownership throughout the motor lifetime and reduce environmental impact.

Brook Crompton, the original innovator in electric motors.

Quality assurance

Stringent quality procedures are observed from first design to finished product in accordance with the ISO9001 documented quality systems.

All factories have been assessed to meet these requirements.

Series 10 IE3

The Brook Crompton Series 10 range is a high quality standard range of electric motors with a specification suitable for most industrial applications.

It covers outputs from 0.75kW up to 375kW in frame sizes 80 to 355.

Benefits include:

- Full output range to meet your requirements
- Efficiencies comply with EN60034-30 (IE3)
- Robust construction for long life
- Mountings: foot, flange, face or combination
- Multi-mount - aluminium range
- Integral feet cast iron - 80 to 355 frame.
- Euro voltage: up to 3kW 230/400V; 4kW and above 400/690V
- Dual frequency (50 / 60Hz)
- IP55
- Metal fan cover
- Metric entries
- Thermal protection fitted as standard
- 220-240V heaters std on the cast iron range
- Inverter duty

Standards and environment

3

Standards

Standards	
Series 10 motors are manufactured to the international standards listed below:	
Performance	IEC 60034-1
Dimensions	IEC 60072-1
Mounting	IEC 60034-7
Enclosure protection	IEC 60034-5
Vibration	IEC 60034-14 (grade A)
Noise	IEC 60034-9

Environment Enclosure

All motors have degrees of IP protection as defined in IEC EN 60034-5. The normal arrangement is IP55. See Specification (page 2) for alternatives.

Motor cooling

Motors are cooled in accordance with IEC 60034-6. The normal arrangement is IC411 (Totally Enclosed Fan Ventilated) via a fan mounted at the non-drive end.

European directives

The following European directives apply:

Directives

Compliance with European directives applying to AC induction motors				
Directives	Low voltage (LV)	Machinery (MD)	Electromagnetic compatibility (EMC)	Energy related products (ErP)
Reference numbers	2006/95/EC 93/68/EEC 73/23/EEC 93/44/EEC 89/392/EEC	2006/42/EC 98/79/EC 98/37/EC 89/336/EEC	2004/108/EC 93/68/EEC 92/31/EEC 96/57/EC	2009/125/EC 2005/32/EC 2000/55/EC 92/42/EEC
Motor CE marked	Yes	No	No	Yes
Standards	EN 60034	Not applicable	EN 60034-1	EN 60034-30
Documentation for customers' technical file	Declaration of conformity	Certificate of incorporation	Statement ^[1]	Declaration of conformity
Safety instructions with every motor	Yes	Yes	Yes	-
Comment	Relevant electrical equipment operating between 50 to 1000 volts AC	Statement ^[2]	Component	Minimum efficiency levels for motor outputs 0.75 - 375 kW 2-6 pole

^[1] Motors operating from a correctly applied, sinusoidal (AC) supply meet the requirements of the EMC directive and are within the limits specified in standard EN 60034-1

^[2] When installed in accordance with our customer safety and installation and maintenance instructions, they can be put into service only when the machinery into which they are being incorporated, has been declared to be in conformity with the machinery directive in accordance with Article 4(2) and Annex II B of that Directive (98/37/EEC)

Minimum Energy Performance Standard

The EU MEPS scheme sets **mandatory** minimum efficiency levels for most single speed 3ph induction motors up to 375 kW rated up to 1000V.

Commission Regulation (EC) No. 640/2009 & amendment 4/2015 covers 2, 4 & 6 pole single speed 3ph induction motors from 0.75 to 375kW, rated up to 1000V based on continuous duty operation. Aiming to reduce energy consumption throughout Europe and the rest of the world, it comes into effect in stages.

The effect of this is to maximise potential savings in electric motor driven systems.

Base of the regulation is an international IEC 60034-30 standard. It defines the following efficiency classes :

IE2 - High Efficiency

IE3 - Premium Efficiency

Efficiency levels in Europe (Time Line)

Mandatory from:

From 1st January 2015:

Minimum efficiency requirement at IE3 level for 7.5 - 375kW motors or IE2 level for motors equipped with an appropriate variable speed drive.

From 1st January 2017:

Minimum efficiency requirement at IE3 level for 0.75 - 375kW motors or IE2 level for motors equipped with an appropriate variable speed drive.

Performance data notes

Speed / torque & speed /current curves

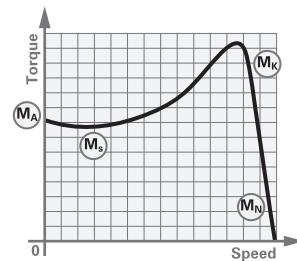

7

DOL starting

Typical speed/current curve

Typical speed/torque curve

- (I_A) Starting current
- (I_N) Full load current
- (M_A) Starting torque or locked rotor torque
- (M_S) Pull up torque or run up torque
- (M_K) Pull out torque or breakdown torque
- (M_N) Full load torque

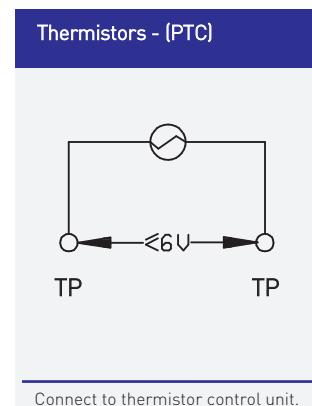

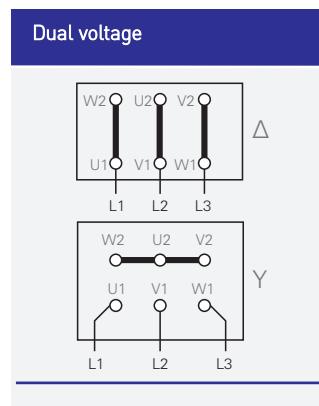

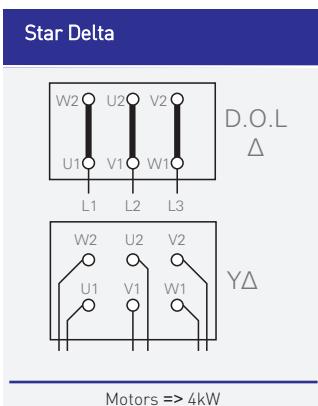

During the run up period in Star, there must be an adequate excess of motor torque over the load torque. The change to Delta must not occur until the motor is near the operating speed. Refer to Brook Crompton for running up against a load in excess of 70% full load during Star Delta starting.

Performance figures are subject to IEC tolerances. Performance figures are based on a 400 volt winding.

$$J \text{ (WK}^2 \text{ or WR}^2\text{)} = \frac{GD^2}{4}$$

$$J \text{ in lb ft}^2 = \frac{\text{k} \text{ gm}^2}{0.042}$$

P/PU-DF frame nomenclature indicates an IE3 efficiency motor

[†]See dimension pages 18 & 19

Performance data notes

11

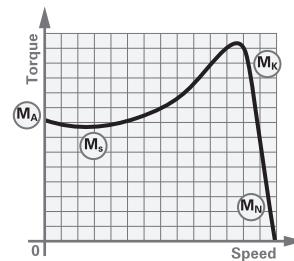

Speed / torque & speed /current curves

DOL starting

Typical speed/current curve

Typical speed/torque curve

(I_A)	Starting current
(I_N)	Full load current
(M_A)	Starting torque or locked rotor torque
(M_S)	Pull up torque or run up torque
(M_K)	Pull out torque or breakdown torque
(M_N)	Full load torque

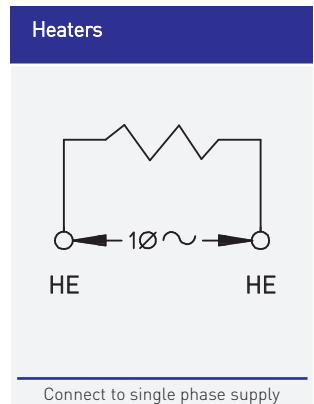

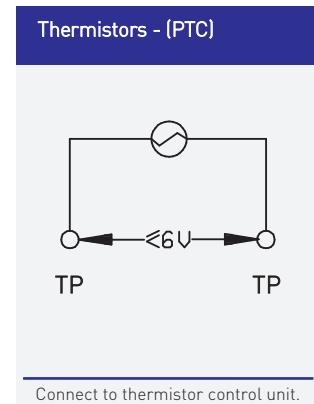

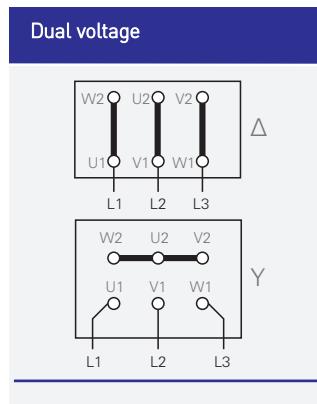

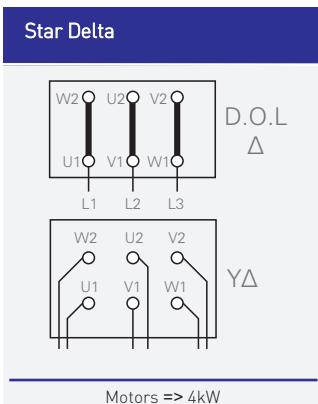

During the run up period in Star, there must be an adequate excess of motor torque over the load torque. The change to Delta must not occur until the motor is near the operating speed. Refer to Brook Crompton for running up against a load in excess of 70% full load during Star Delta starting.

Performance figures are subject to IEC tolerances. Performance figures are based on a 400 volt winding.

$$J \text{ (WK}^2 \text{ or WR}^2\text{)} = \frac{GD^2}{4}$$

$$J \text{ in lb ft}^2 = \frac{\text{kgm}^2}{0.042}$$

^[1] Frame sizes 80-225 have sealed for life bearings with C3 clearances. Frame sizes 250-355 bearings have regreasing facilities with C3 clearance.

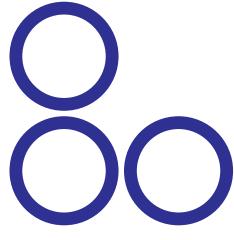

^[2] Sizes given are in mm and represent bore x outside diameter x width.

The seal material used on all frame sizes and all polarity is nitrile rubber (NBR).

Sealed for life bearings are fitted with a premium quality grease to ensure exceptional reliability under a wide range of operating conditions. Under normal operating conditions, a grease life of more than 25,000 hours can be achieved.

The regreasing time should be reduced if the bearing operating temperature is in excess of 70°C.
